Profile

Business Analyst with 1.5+ years of experience in requirements gathering, business process analysis, stakeholder management, and Agile delivery for SaaS products. Skilled in translating business needs into BRDs, PRDs, FRDs, user stories, and acceptance criteria, with strengths in gap analysis, AS-IS/TO-BE process mapping, and data-driven decision-making. Leverages Generative AI tools to accelerate research, documentation, and prototyping; hands-on with SQL, Power BI, and Agile Scrum.

- Experience
- Junior Business Analyst (Product-Focused) - Zodopt Technologies**
Apr 2025 – June 2026
 - Authored and standardized BRDs, PRDs, FRDs, user stories, and acceptance criteria, accelerating cross-functional delivery by 20%.
 - Conducted requirements gathering, stakeholder interviews, gap analysis, and competitive research to support product enhancements and client implementations.
 - Streamlined requirements analysis and documentation turnaround time by leveraging Generative AI tools, prompt engineering, and AI-assisted research.
 - Facilitated Agile Scrum ceremonies including sprint planning, backlog refinement, sprint reviews, retrospectives, and product demonstrations.
 - Collaborated with product managers, stakeholders, and engineering teams to translate business needs into actionable product requirements and delivery plans.
 - Increased sprint team velocity by 30% through improved requirement clarity, backlog prioritization, user story mapping, and stakeholder alignment.

Business Analyst Intern – Venpra Technologies
Feb 2025 – Mar 2025
 - Documented business and functional requirements supporting a CRM implementation, improving requirement clarity and stakeholder alignment.
 - Mapped AS-IS and TO-BE workflows with stakeholders and created requirement documents and wireframes to support solution design and process improvements.

Founder's Office | Product Management – Optimanage Software Private Limited
Dec 2024 – Feb 2025
 - Conducted product discovery through user interviews and research, defining problem statements and feature requirements for an early-stage AI mental wellness MVP.
 - Validated product hypotheses through feature prioritization, user flows, and AI-assisted prototyping while collaborating with the founder and engineering team on MVP planning.
